

MSI-3550 Digital Weight Indicators

PRACTICAL SOLUTIONS FOR THE WAY YOU WEIGH.

Versatility doesn't always come at a high cost.

The new MSI-3550 proves you don't have to sacrifice simplicity to get a versatile digital weight indicator. Although it is an economical and simply operated indicator, it fulfills MSI's commitment to flexible features and rugged product construction.

The 3550's advanced electronics and simple interface make it easy to set up and operate. Like all MSI products, it is designed to perform effectively in your toughest work environment.

- Oversized LED display often eliminates the need for a remote scoreboard because you can read it from more than 50 feet away.
- Rugged stainless steel NEMA IV enclosure is washdown safe for use in the most abusive industrial and marine environments.
- Built-in surge protection ensures dependable operation. A universal 85-265 VAC power input is standard.
- Bidirectional RS232 facilitates control and/or storage of your weighing data. You can exchange the data with a computer or send it to a printer with pre-formatted text.
- Infrared remote control option, with 0-9 keyboard entry, allows you to perform all weighing functions conveniently from a distance up to 25 ft. (8m).

Besides utilizing the 3550 as a basic weight indicator, you can tailor its user-defined features to meet a variety of weighing applications.

- Totalizing for inventory and filling.
- Setpoints for over/under check-weighing, overload prevention and process control.
- Peak Hold for testing.

If you would like additional information on the MSI-3550 digital indicator or other quality weighing products, you can call or write MSI, or browse the company's web site "www.msiscales.com".
